RECENT PROJECTS

ROBATONIST	Full-Stack Engineer	robotanist.herokuapp.com	2016

Platform for botany enthusiasts to search for and find the family, genera, and species of thousands of plants

- Designed the UI/UX (mockups, wireframes, and site layout) using custom built Bootstrap theme, Sass, and CSS3.
- Template the front end views using JavaScript, jQuery, AJAX, Handlebars, and HTML5 for seamless content calls.
- Architected RESTful Ruby on Rails server with custom controllers, models, and routing following MVC patterns.
- Engineered NoSQL DB using MongoDB and utilized Mongoid Search Index to index 7000+ plant species.
- Integrated Instagram, Twitter and Wikipedia APIs to query for and display on front end botanic information.
